

WATER CONSUMPTION AND DISCHARGE – MANG INASAL GENSAN HIGHWAY

Mang Inasal Highway's previous discharge permit specifies a daily effluent rate of 9.63 cubic meters (cbm).

Recent monitoring data indicates that the store's actual daily water consumption is lower than this value.

Based on the store's daily water usage records, the average consumption for 2024 is approximately 8.5 cbm. These figures demonstrate that the store's effluent discharge remains below the limits set by the discharge permit, which usually is 80% of the total water consumption.

Attaching here with are the water bills for the previous months and the daily monitoring of our water consumption for validation.
